

WEEK 8 : FRONTEND COMPLETION SCREENSHOTS

Name: Vennapu Sree Sai Chandra Harsha

Intern ID: TBI-26100998

Project Name: AI-Powered Crop Advisory Chatbot (Prototype)

Screenshot 1 : Dashboard

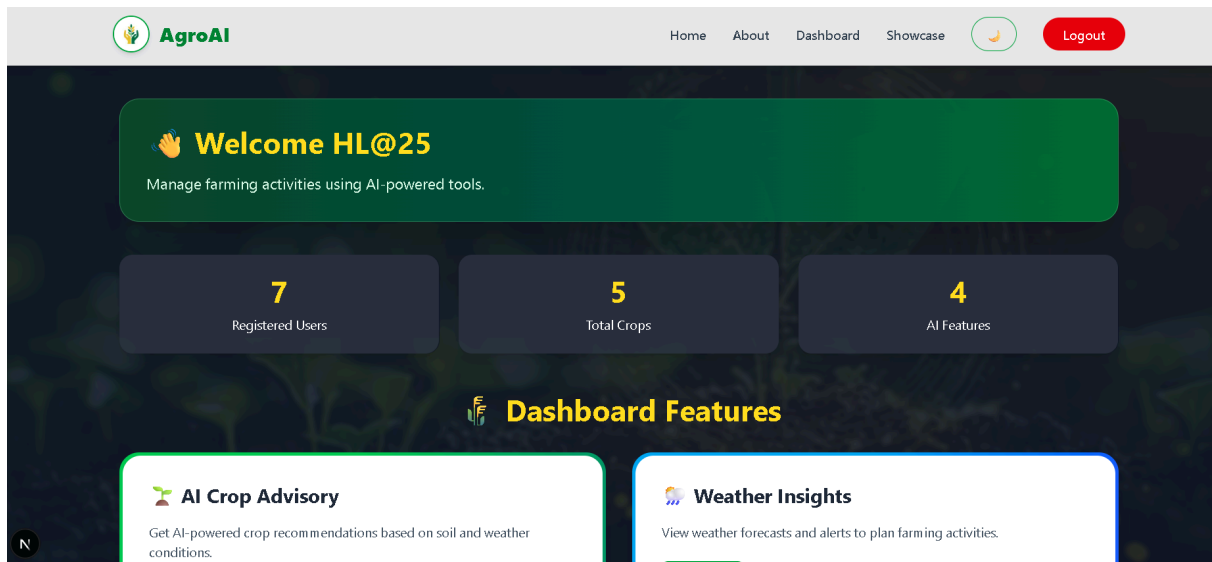

Figure 1: Authenticated dashboard displaying logged-in user information and real-time statistics retrieved from the backend API.

Screenshot 2 : Create Flow

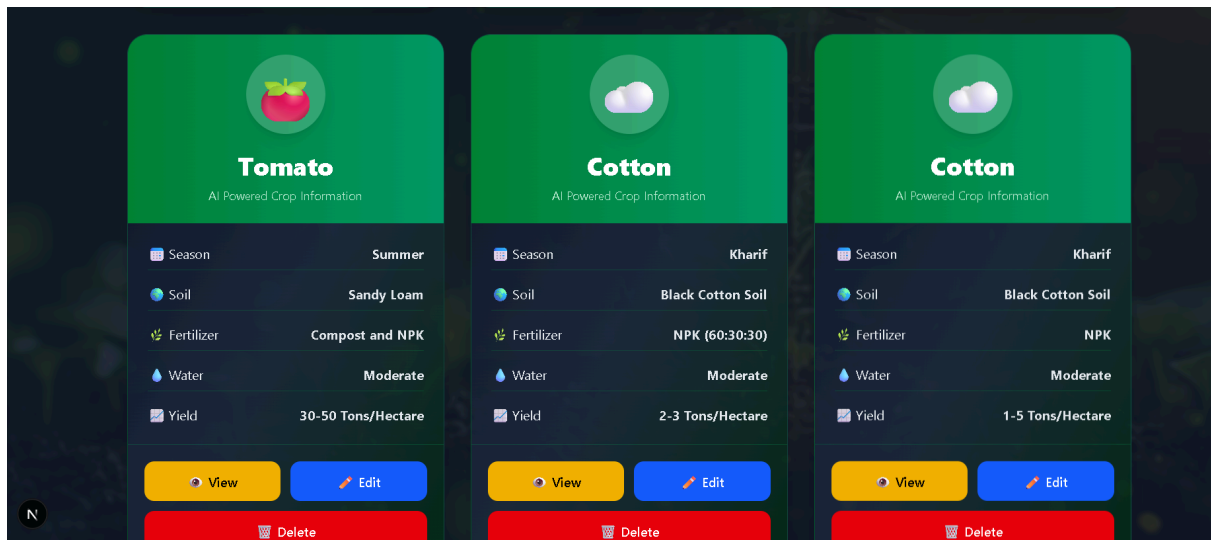

Figure 2 : Crop creation through the frontend. After submitting the form, the new crop is stored in MongoDB and displayed immediately in the crop database.

Screenshot 3 : Update Flow

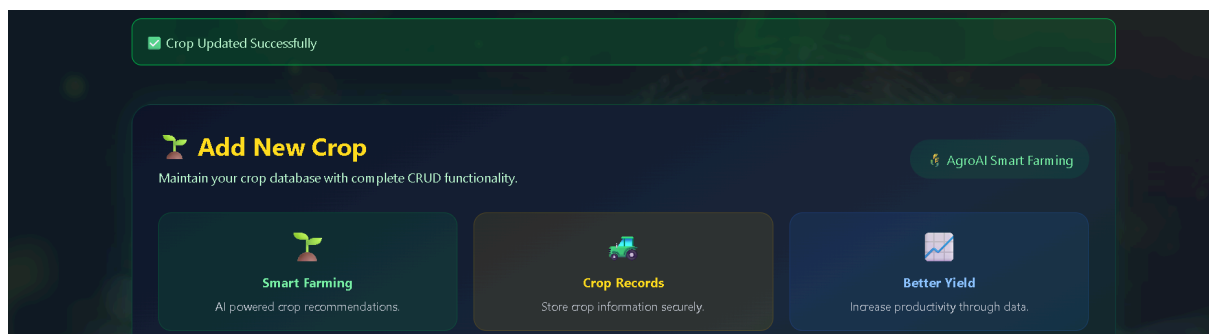

Figure 3: Crop information updated successfully through the frontend using the Update (PUT) API. The modified values are reflected immediately in the crop database.

Screenshot 4 : Delete Flow

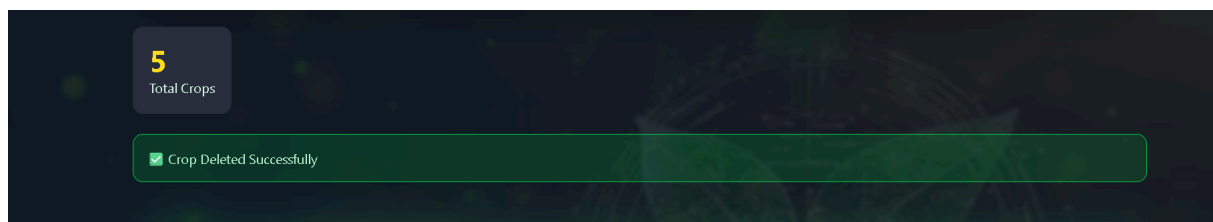

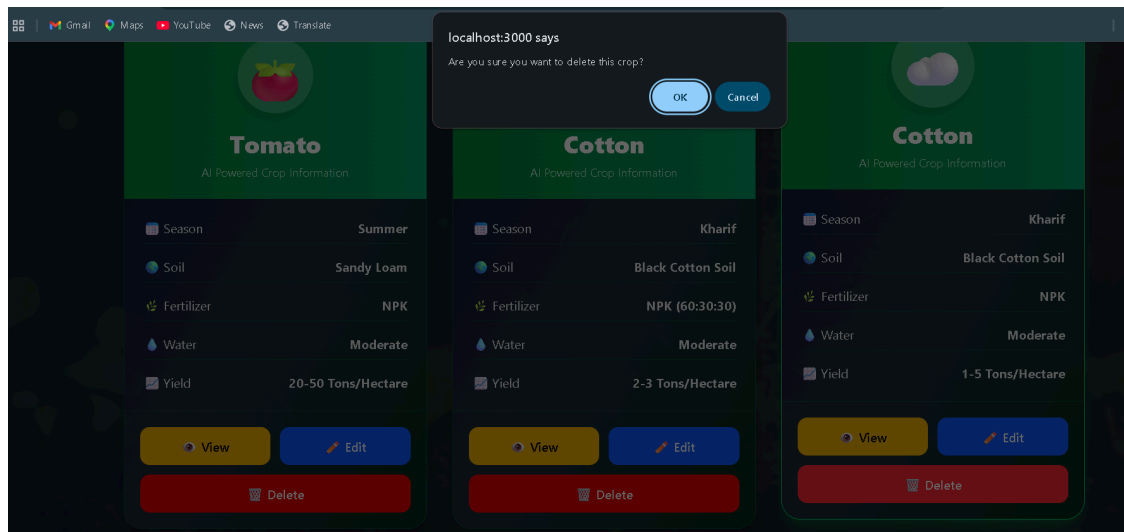

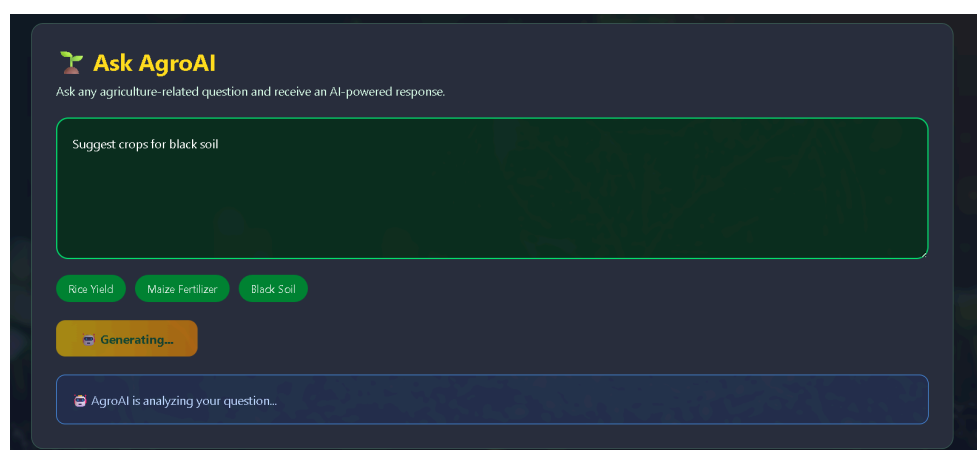

Figure 4: Crop deleted successfully through the frontend using the Delete (DELETE) API. The record is removed from the crop database and the UI updates automatically.

Screenshot 5 : AI Feature UI

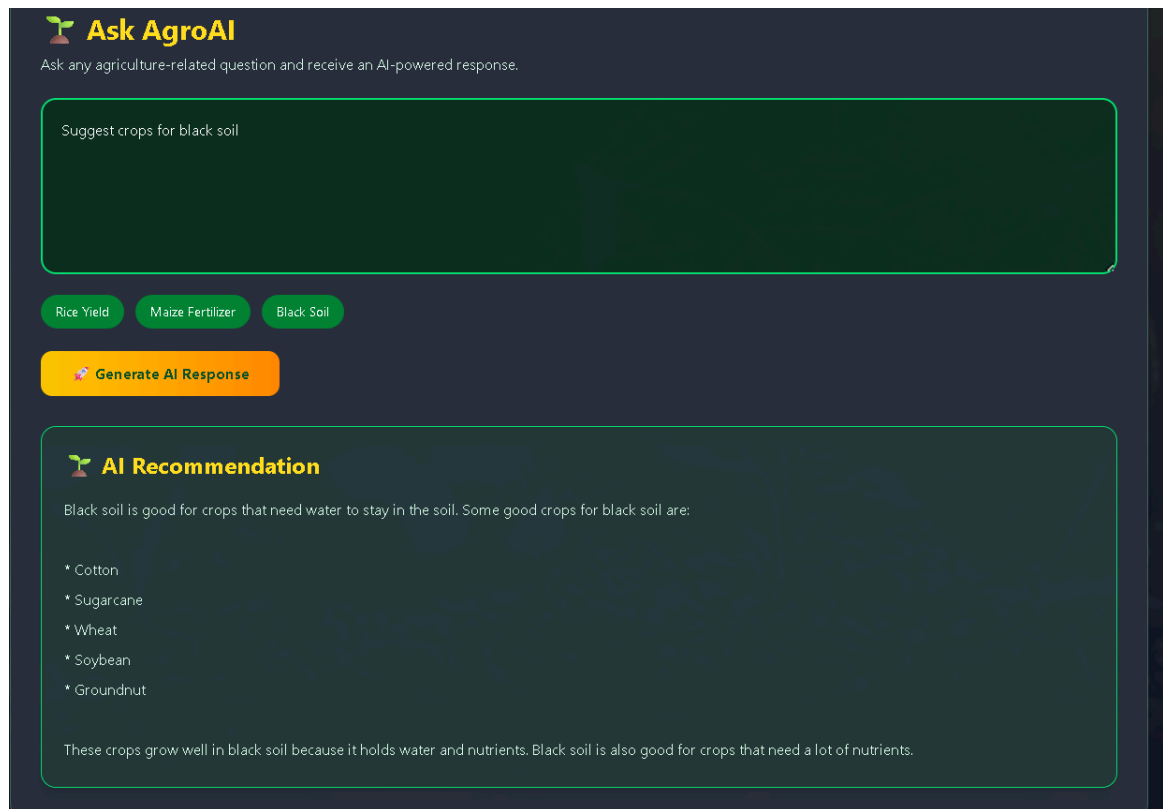

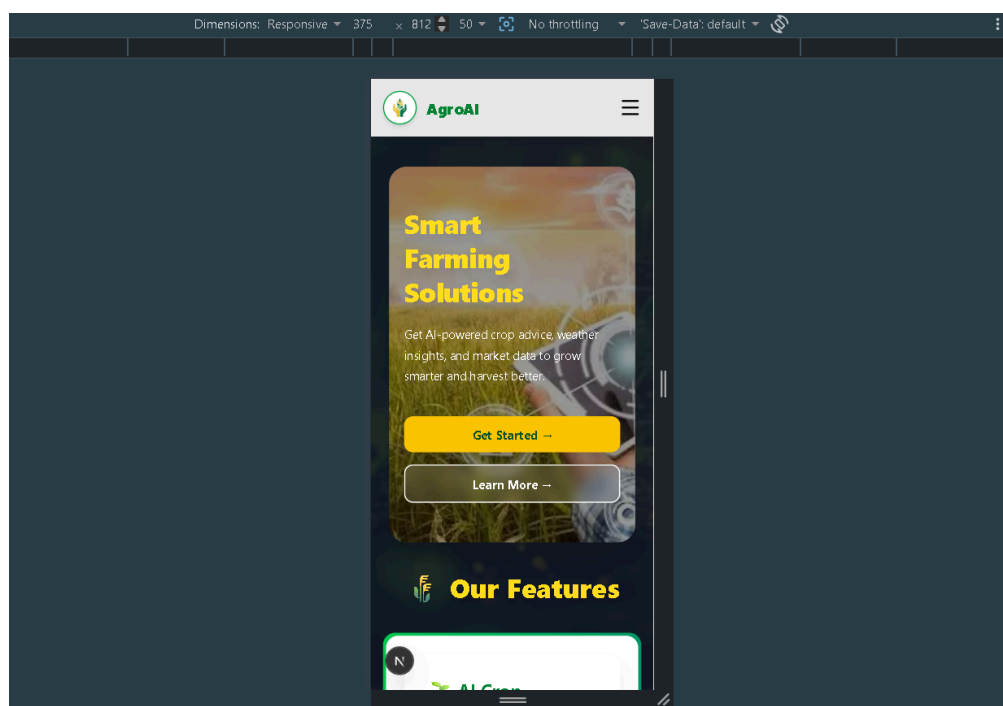

Figure 5: AI Crop Advisory interface showing user input and AI-generated recommendation.

Screenshot 6 : Responsive Design

Mobile(375px)

Desktop (1440px)

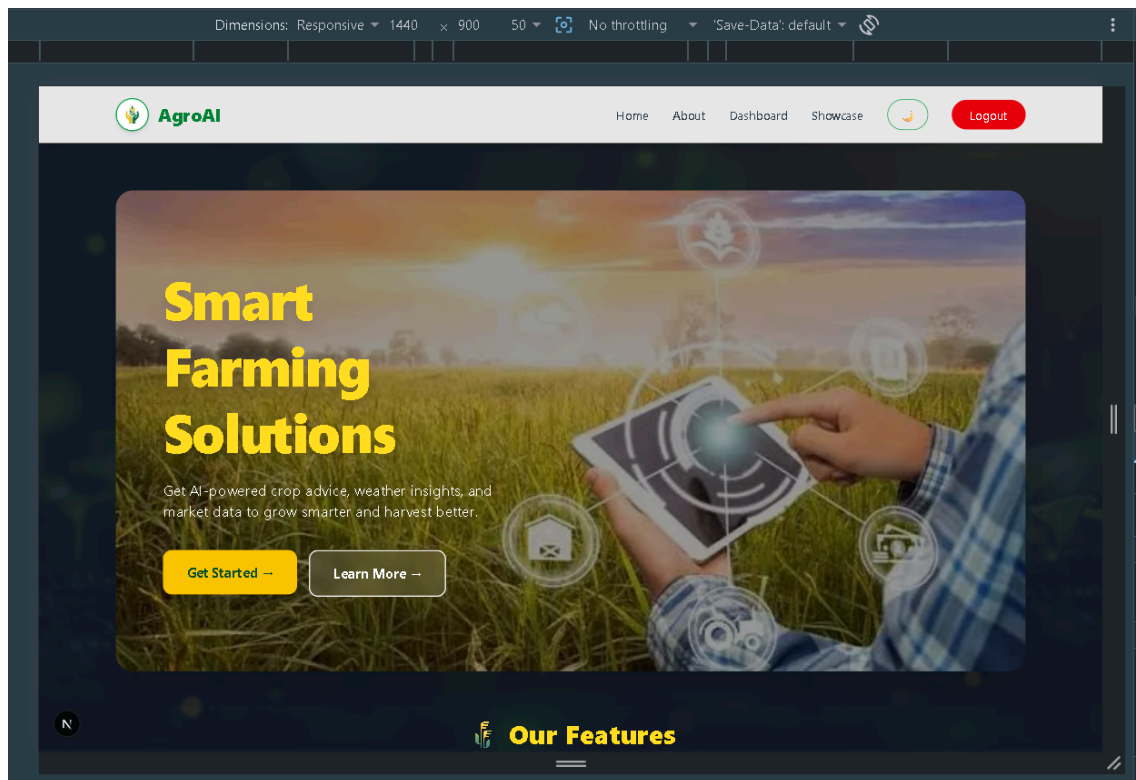

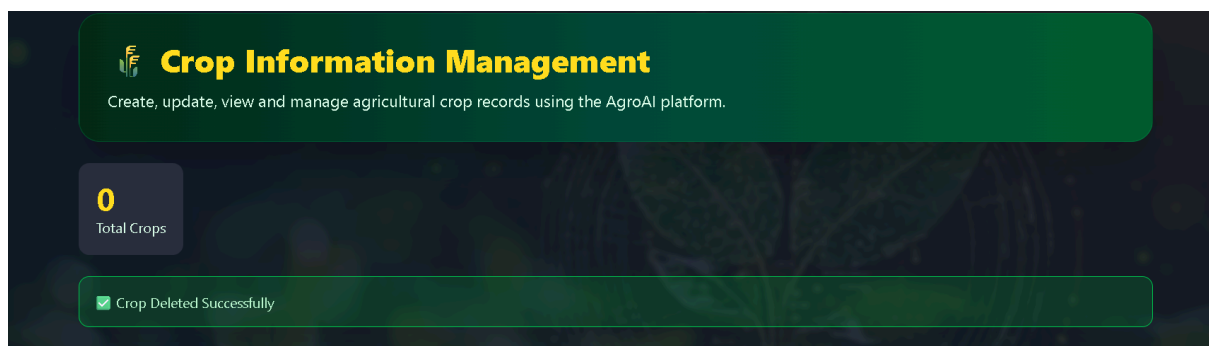

Figure 6: Responsive layout verification at 375px (mobile) and 1440px (desktop).

Screenshot 7 : Empty Space

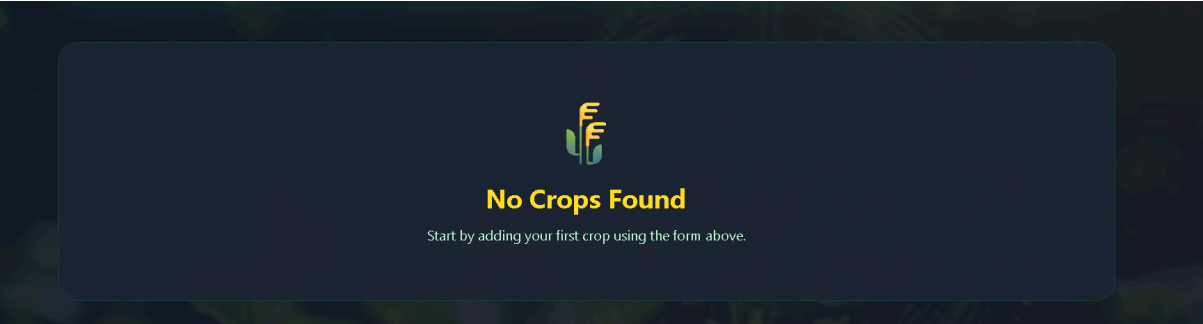

Figure 7: Empty-state design displayed when no crop records are available.

Screenshot 8 : Network Tab Verification

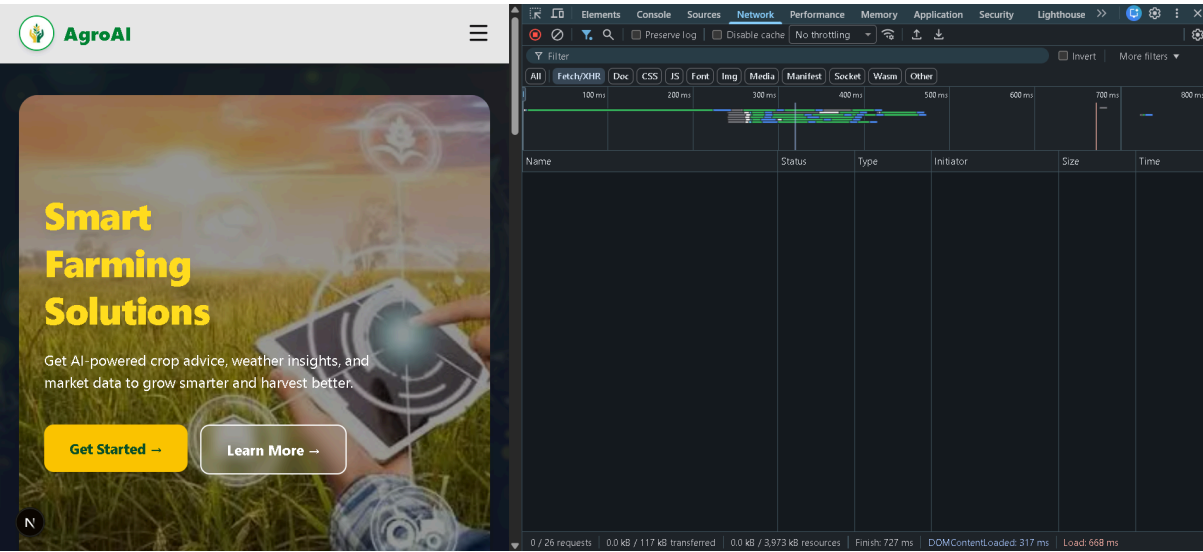

Figure 8: Chrome DevTools Network tab showing successful API requests (HTTP 200) between the frontend and backend.
